

1. The Site Plan is for the renovation and redevelopment of an existing hotel and resort, including restaurants, gaming and meeting rooms, and the continued use of a Museum, Marina and associated parking facilities.
2. The property is identified as Parcel 28, Lot 1 Tract 1 and Residue Tract 1 on Calvert County Tax Map 103.
3. Total Site Area: 230,544 sq ft or 5.29 acres
4. Area dedicated to public roads: 0 acres
5. The contractor will have sole responsibility for the construction means, methods, and techniques of executing his work, including safety.
6. The property is zoned M, Maritime and is located within the Bonus Density Overlay District, as shown on the Town of Chesapeake Beach Zoning Map.
7.

Required	Provided	
Minimum lot size	5,000 sq ft	33,230 sq ft
Minimum lot width:	25 ft	230 ft ±
8.

Required	Provided	
Setbacks, Open Space and Height	10 ft	--
Minimum front yard setback:	8 ft	--
Minimum side yard setback:	8 ft	--
Minimum rear yard setback:	20 ft	32.7 ft
Minimum open space:	20%	30.7%
Maximum building height:	70 ft	70 ft
9. The parking on Lot 1 adjoining Residue Tract 1 will be abandoned because the development is combined.
-- The proposed building on the northeastern corner of Residue Tract 1 is being built over the existing building foundation.
10.

a. Parking Required: 722 spaces (see tabulation chart below)

b. Parking Provided: 728 spaces

551 Standard Parking spaces
140 Compact Parking spaces (max 144 or 20%)
17 Handicap spaces
17 Van Accessible Handicap spaces (min 1/4 of H/C spaces)
3 Van Accessible Spaces
728 Total spaces provided
11.

a. Loading (See loading tabulation chart)

Loading Required: 1 spaces

Loading Provided: 3 spaces
12.

a. Bicycle Parking (See bicycle parking tabulation chart)

Required: 22 spaces

Provided: 24 spaces
13. The Property is located entirely in the Intensely Developed Area (IDA) of the Chesapeake Bay Critical Area. Stormwater Management facilities are indicated on the Site Plan which demonstrate compliance with the Development Standards in Intensely Developed Areas (IDAs), per Section 4-410(a)(5) of the Town of Chesapeake Beach Zoning Ordinance.
14. The subject Property is located within the 100-year floodplain per the Federal Emergency Management Agency, Flood Insurance Rate Map for the Town of Chesapeake Beach, Maryland, Calvert County, Community Plan No. 24009 C00019, Effective date: November 19, 2014.
15. The project area lies within the Flood Hazard Zone AE-Elevation 4' 0", AE Elevation = 5' 0" and VE Elevation 6' 0" per the Chesapeake Beach Flood Management Ordinance. A 1-foot buffer shall be added to the base elevation of 6' 0".
16. All mechanical and electrical infrastructure shall be no lower than elevation 7' 0". All enclosed areas below elevation 7' 0" shall be vented to the exterior.
17. An Elevation Certificate shall be provided prior to the issuance of the Use and Occupancy Permit.
18.

a. Inoperative Area Summary

Limits of Construction: 199,981.0 sq ft (4.59 ac)
Existing Impervious Area: 162,575 sq ft (4.42 ac)
Proposed Impervious Area: 178,823.0 sq ft (4.64 ac)
19. Existing Forest: There is no existing forest on site.
20. A Sediment and Erosion Control Plan will be prepared, in accordance with 2011 Maryland Standards and Specifications for Soil Erosion and Sediment Control and shall be filed with Calvert County Soil Conservation District.
21. The development is in conformance with the habitat protection areas provisions of the Town Critical Area Program.
22. Test pit required to locate all dirt and wet utilities such as ex. water & sewer, gas, electric cable prior to constructing entire storm drainage and water & sewer system; minimum 12" vertical clearance required between existing and proposed pipes; the contractor shall contact the engineer immediately if the above mentioned clearance can not be achieved prior to construction.
23. all walls, decks, and other areas with elevation change greater than 30" shall have a safety railing (42" min.) to match existing railings and provide handrails for all ramps and pedestrian areas with a longitudinal slope of 4% or greater.
24. The site fills: Per geotechnical report prepared by Hills-Carnes, the pavement section is based on at least 2 feet of imported soil. The soil can be common borrow expd'd CH, CL (with less than 30% sand), CL, MH, ML (with less than 30% sand); or RC-8. The imported fill soil subgrade should be compacted to a minimum of 95% of the dry density in accordance with ASTM D 698 or AC-SPT 1500. Fills less than 2 feet shall be RC-6. Existing asphalt shall be sheets foot rolled prior to placement. All concrete/asphalt shall be removed below green space areas.
25. Source of topography was field run by Ben Dyer Associates, Inc.
26. provide railing on all walls over 30" in height.

A) Area within 15' Buffer Yard = 13,450 SF
B) Area of Buffer Yard Plantings = 3,275 SF
C) Area of remaining Buffer Yard Mitigation $(A \times .75\% - B) = 8,613$ SF
D) Area of disturbance within the 100' BEA = 72,375 SF
E) Twice the size of area of disturbance within the 100' BEA $(D \times 2) = 144,750$ SF
F) Area of onsite forest planting = 10,891 SF
G) Removal of existing impervious surface = 16,553 SF
H) Required offset mitigation $(C - E) - (F + G) = 125,315$ SF

Proposed Offsets:

I) Offsite Stormwater Runoff Treatment = 152,400 SF
J) Construction of Best Management Practices for stormwater in excess of those required = 20,038 SF
K) Includes excess disturbance area from Means Easement treated at 1,125 SF of micro-bioretenard area

K) Total Offsets Proposed $(I + J) = 172,438$ SF

JANUARY 2016 50.006-Y

PLANTING SPECIFICATIONS

I. General

A. Scope: The Landscape Contractor shall provide all labor, materials, and equipment necessary to complete the work shown on the drawings and described in the specifications. The Landscape Contractor shall verify all quantities of plant material shown on the plan and in the plant list. In the event of a discrepancy between the quantities shown on the plan and in the plant list, the plan shall govern. Immediately inform the Landscape Architect of any such discrepancy before delivering or installing any plant material.

B. Utilities: The Landscape Contractor shall notify M&E Utility (800-257-7777) to verify the location of all non-utilities and shall ask the General Contractor to locate lighting and other on-site utilities in the field before proceeding with the installation of any planting. If conditions arise in the field which necessitate the shifting of a plant location more than 15', the Landscape Architect is to be consulted.

C. Substitutions: Any change in the type, size and quantity of plant material must be approved by the Landscape Architect prior to installation.

D. Quality Standards: All plant material must be nursery grown and meet all of the qualitative criteria established by the current issue of the American Standard for Nursery Stock specifications published by the American Nursery & Landscape Association.

Furthermore, all plant material must exhibit a full, symmetrical habit of growth that is characteristic of quality grown nursery stock. Any plant material exhibiting a spindly or top-sided habit or any other feature that detracts from its health or appearance, will be rejected.

E. Dig Material: All dug plant material shall have been dug before bud break or after leaf maturation. Any plant material exhibiting dropping new growth within two (2) weeks of being planted will be rejected and must be removed from the job.

Balled and burlapped plants shall be dug with firm natural balls of earth. Anti-desiccants shall be applied on all material dug while in foliage.

F. Poor Drainage: No plants shall be planted in situations that show evidence of poor drainage. Such situations shall immediately be brought to the attention of the Landscape Architect and Owner, and if they deem necessary, the plants shall be relocated or the contract shall be adjusted to allow for drainage correction at a negotiated cost.

G. Site Preparation: It shall be the General Contractor's responsibility to present "clean" soil conditions to the Landscape Contractor prior to any landscape installation. "Clean" soil may include on-site soil but must be free of pavement materials, muck, root systems, petroleum or other chemical substances, blue stone, construction debris and other materials larger than 4" in diameter. The "clean" soil shall extend to the following minimum depths: 18" where trees are proposed, 12" where shrubs are proposed and 4" where lawn is proposed. If the Landscape Contractor encounters any areas to be deficient regarding these "clean" soil specifications, he shall report this condition to the Landscape Architect and Owner prior to planting in those areas.

H. Workmanship: During planting, all areas shall be kept neat and clean, and all reasonable precautions shall be taken to avoid damage to existing plants, turf and structures. Upon completion, all debris and waste material resulting from planting operations shall be removed from the project and the area cleaned up. Any damaged areas shall be restored to their original condition.

I. Water: If available on-site, the Owner shall supply water at no cost. It will be the Landscape Contractor's responsibility to supply water if there is none on the site.

J. Guarantee: All plant material shall be guaranteed for a period of one (1) year. It is the Landscape Contractor's responsibility to ensure that all plant material be maintained in a healthy condition during this period.

The Landscape Contractor shall replace within 30 days of notice any and all plant material that declines to less than 75% of its original planted condition due to cultural reasons. The Landscape Contractor shall not be responsible for replacing plants for cultural reasons after the first instance of decline. If decline for cultural reasons occurs a second time, the Landscape Architect shall be notified and an alternative planting remedy will be negotiated at an extra cost to the owner.

The Landscape Contractor shall not be held responsible for any plant losses due to mechanical injury, theft or vandalism after the job is accepted by the owner.

II. Planting Procedures

A. Planting Beds: With the exception of those trees shown on the plan as individuals, all plants are to be planted into prepared planting beds which are designated on the plan with dashed outlines. The outline of each bed shall be spade dug to be a smooth, continuous sharp-cut edge. The entire area within the outline of the bed shall be thoroughly loosened to a depth of 6"-8" by picking or other means and all materials unsuitable for plant growth and all rocks and debris greater than 4" diameter are to be removed. Topsoil (that meets the qualitative description of the Maryland State Highway Administration's Materials Specification 420.02 Natural Topsoil) shall be applied over the loosened subsoil to a minimum depth of 6", creating a slightly raised planting bed in relation to the surrounding area.

B. Tree Planting:

1. Preparing tree pit: The walls of the tree pit shall be dug so that they are vertical and scarified. The diameter of the pit shall be a total of 24" wider than the ball diameter. Care should be taken not to excavate the tree pit below a depth that allows 2" of the ball to be above finished grade. If the pit is dug too deep, then the bottom of the pit must be firmly tamped to prevent settlement.

2. Placing Tree in Pit: Place the tree in the pit either by lifting and carrying the tree by its ball (never lift by branches or trunk) and then lowering it into the pit.

Set the tree straight and in the center of the pit with the most desirable side of the tree facing toward the prominent view (sidewalk, building, street, etc.).

3. Backfilling Tree Pit: Backfill the tree pit with a mixture of 2/3 original excavated material amended with 1/3 topsoil (as specified in I.A. above)The step will have been partially completed if the tree is planted into a prepared bed as described above.)

Backfill sides of tree pit halfway with soil mixture and tamp before adding more backfill. Cut rope or wire on ball of tree and pull burlap back to the edge of the tree ball. Remove all plastic wraps and twine.

Finish backfilling sides of tree pit and tamp firmly. Never cover top of root ball with soil.

Form a saucer above existing grade and around the outer rim of the tree pit. Muck top of root ball and saucer within 48 hours to a depth of 2" to 3".

Water thoroughly on the interior of the tree saucer until it is filled, even if it is raining. A second watering may be necessary to insure saturation of the root ball. Prune out any dead or broken branches.

4. Tree bracing: All trees less than 2" cal. are to be braced with two (2) 6" hardwood stakes 180 degrees apart. All trees 2" cal. or larger are to be braced with three (3) guy wires and ground stakes spaced evenly apart (120 degrees) in a circle. (See details on plan for additional information). Staking and guying shall be completed within 48 hours of planting the tree.

C. Shrub Planting:

1. Preparing Shrub Pit: The walls of the shrub pit shall be dug so that they are vertical and scarified. The diameter of the pit shall be a total of 12" wider than the ball diameter. The depth of the pit shall be at an elevation that allows 2" of the ball to be above finished grade after the bottom of the pit has been firmly tamped to prevent settlement.

2. Placing Shrub in Pit: Container grown material shall have the container removed and the outside of the root ball examined for the presence of encircling roots. If present, these roots should be severed with a sharp knife and loosened from the earth ball by means of pulling them out slightly by hand prior to planting. Place the shrub in the pit either by lifting or carrying the shrub by its root ball (never lift by branches) and then lowering it into the pit.

Set the shrub straight and in the center of the pit with the most desirable side of the shrub facing toward the prominent view (sidewalk, building, street, etc.).

3. Backfilling Shrub Pit: Backfill the shrub pit halfway with soil mixture and tamp before adding more backfill. Cut rope or wire on ball of shrub and pull burlap (if B&B) back to the edge of the root ball. Remove all plastic wraps and twine.

Finish backfilling sides of pit and tamp firmly. Never cover top of root ball with soil. Form a saucer above existing grade and around the outer rim of the shrub pit. Muck top of root ball, saucer, and the entire planting bed within 48 hours to a depth of 2" to 3".

Water thoroughly on the interior of the shrub saucer until it is filled, even if it is raining. A second watering may be necessary to insure saturation of root ball. Prune out any dead branches.

D. Seeding & Sodding

All disturbed areas not covered by buildings, pavements and planting areas are to be established in a lawn of turf-type Tall Fescue either by seed or sod, or combination, depending on the time of year, availability of materials and Owner's preference.

Project Summary

The project site is located on the north side of Mears Ave and east side of Bayside Road Chesapeake Beach, MD. The site is approximately 0.35 miles south of the Chesapeake Beach Road and Bayside Road intersection. The site is zoned commercial and is currently developed.

The existing site has a paved parking lot with commercial buildings. The majority of soil type within the site limits is "Ub" which is an HSG D soil. The project proposes to construct a 4 level parking structure, an asphalt parking lot, demolish partially existing buildings and expand existing buildings.

The site is located within 1,000 feet from the head of tide of Chesapeake Bay shoreline; therefore, the site is located in the critical area. This project must reduce stormwater pollutant loads from the development site to a level at least 10% below the load generated by same site prior to development. It is known as Critical Area 10% Rule Compliance.

The total site area is 5.29 acres and the area of the limit of construction (LOC) is 4.59 acres. The existing impervious area within the LOC is 4.42 acres and the proposed impervious area within the LOC is 4.04 acres. The impervious area between the proposed and existing condition within the limit of construction will decrease by 0.38 ac. Current state regulations require that an impervious area shall be reduced and/or water quality treatment provided for 50% of the existing impervious area and the increased impervious area must be treated for water quality and quantity via Environmental Site Design (ESD). ESD is not required because the project will not increase an impervious area. Therefore, 1.83 ac. which is 50% of the existing impervious area minus the reduction in impervious area of 0.38 ac. must be treated for water quality. This project will be treated as a re-development project, because the total site impervious area under existing condition exceeds 40%.

In order to meet the water quality requirements of the site, this project will provide micro bio-retention and planter box facilities on the south and north side of the proposed parking structure. During a storm event, runoff temporarily ponds 6" above the mulch layer and is stored the water quality control volume (WQv) to remove pollutants in the micro-bioretenion facilities. The treated runoff is returned to conveyance system through a 6" underdrain pipe.

The storm drain system is designed to convey the peak 10 year storm event.

SWM COMPUTATIONS
ROD & REEL INC. PROPERTIES

Site Area = 5.29 Acres

Limit of Construction = 4.59 Acres

Existing Impervious Area = 4.42 Acres

Proposed Impervious Area = 4.04 Acres

Reduction in Impervious Area = 0.38 Acres

- Redevelopment

Area to be treated:

- 50% of the existing impervious area = $4.42 \times 0.5 = 2.21$ Acres
- Reduction in impervious area = $4.42 - 4.04 = 0.38$ Acres

Area to be treated = $2.21 - 0.38 = 1.83$ Acres

- Required Water Quality Volume

$$= \frac{1" \times 0.95 \times 1.83}{12}$$

$$R_v = 0.95$$

$$= 0.1449 \text{ Ac-Ft}$$

$$= 6,311 \text{ CF}$$

- Required surface area of the ESD Facilities (Bio-Retention Planter Boxes)

- Each facility will have a 0.5' surface ponding depth and 2.5' bio soil media

$$6,311 = 0.5 (\text{Surface Area}) + (\text{Surface Area}) (\text{Media Depth}) (0.4)$$

$$= 0.5 (\text{Surface Area}) + (\text{Surface Area}) (2.5) (0.4)$$

$$6,311 = 1.5 (\text{Surface Area})$$

$$\text{Required Surface Area} = 4,207.3 \text{ SF}$$

Surface Area Provided = 4,786 SF

- ESDv provided:
 - I. Facilities with 2.5' media depth (Surface Area = 3,590 SF; Ponding Depth = 0.5')

$$\begin{aligned}\text{ESDv} &= 0.5 (3,590) + 3,590 (2.5) (0.4) \\ &= 3,590 (1.5) \\ &= 5,385 \text{ CF}\end{aligned}$$

- II. Facilities with 2.0' media depth (Surface Area = 1,196 SF; Ponding Depth = 0.75')

$$\begin{aligned}\text{ESDv} &= (0.75) (1,196) + 1,196 (2.0) (0.4) \\ &= 1,854 \text{ CF}\end{aligned}$$

Total ESDv provided = 7,239 CF

Calculation Summary

Critical Area 10% Calculations

Removal Requirement, RR (lbs P / yr) after non-structural and micro-scale BMPs (Steps 5 and 6)	0.19
Total Load Reduction (lbs P / year)	2.38
Total Load Reduction Remaining (lbs P / yr) after structural practices (Step 9)	0.00
Total Load Reduction (lbs P / year)	2.38
Total Load Reduction Remaining (lbs P / yr)	0.00

MDE's ESD to the MEP Calculations

Maryland ESD Calculations and 10% Phosphorus Removal					Last Update:	10/28/2020													
Project Name:		ROD & REEL INC. PROPERTIES																	
Date:		28-Oct-20																	
	data input cells																		
	calculation cells																		
Step 1: Complete ESD Implementation Checklist																			
Check all of the Following ESD Practices That Were Implemented at Site					Yes - No - N/A														
Environmental Mapping Was Conducted at Site Prior to Layout					YES														
Natural Areas Were Conserved (e.g., forests, wetlands, steep slopes, floodplains)					YES														
Stream, Wetland and Shoreline Buffers Were Reserved					YES														
Disturbance of Permeable Soils Was Minimized					YES														
Natural Flow Paths Were Maintained Across the Site					YES														
Building Layout Was Fingerprinted to Reduce Clearing and Grading at Site					YES														
Site Grading Promoted Sheetflow From Impervious Areas to Pervious Ones					YES														
Site Design Was Evaluated to Reduce Creation of Needless Impervious Cover					YES														
Site Design Was Evaluated to Maximize Disconnection of Impervious Cover					YES														
Site Design Was Evaluated to Identify Potential Hotspot Generating Area for Stormwater Treatment					YES														
Erosion and Sediment Control Practices and Post Construction Stormwater Management Practices Were Integrated into a Comprehensive Plan					YES														
Tree Planting Was Used at the Site to Convert Turf Areas into Forest					YES														
Step 2: Calculate Site Imperviousness and Water Quality Volume, WQv (for redevelopment)																			
Site Area, A (acres)	4.59																		
Existing Impervious Surface Area (acres)	4.42																		
Proposed Impervious Surface Area (acres)	4.04																		
Rainfall Depth, P (in)	1.0																		
Existing Imperviousness, I _{pre}	96.3%																		
Proposed Imperviousness, I _{post}	88.0%																		
Water Quality Calculation for Redevelopment Only																			
Required Treatment Area (acres)	1.83																		
Runoff Coefficient, Rv	0.95																		
Water Quality Volume, WQv (cf)	6,311																		
Step 4: Calculate Environmental Site Design (ESD) Rainfall Target, P _E																			
Development Category (for ESD)		Redevelopment																	
% Soil Type A	0%																		
% Soil Type B	0%																		
% Soil Type C	0%																		
% Soil Type D	100%																		
Pre-Developed Condition, RCN _{woods}	77																		
Soil Type A ESD Rainfall Target, P _E (in)	0.00																		
Soil Type B ESD Rainfall Target, P _E (in)	0.00																		
Soil Type C ESD Rainfall Target, P _E (in)	0.00																		
Soil Type D ESD Rainfall Target, P _E (in)	0.00																		
Maximum P _E (in)	2.7																		
Site ESD Rainfall Target, P _E (in)		0.00																	
ESD Runoff Depth, Q _E (in)		0.00																	
ESD Runoff Volume, ESDv (cf)		0																	
Total Treatment Volume (cf)		6,311																	

Step 5: Select Nonstructural Practices to Treat the ESD Rainfall Target															Critical Area Credits				
Nonstructural Practices	P _E Credit Description	Contributing Drainage Area (sf)	Direct WQv or ESDv Received by Practice (cf)	WQv or ESDv from Up-Gradient Practices (cf)	P _E Credit (in)	WQV or ESDv credit (cf)	Runoff Volume Remaining (cf)				Baseline Phosphorous Removal Efficiency	Average Adjusted Removal Efficiency Rate	P Load to Practice (lbs/yr)	Load Reduction (lbs/yr)	Remaining Load (lbs/yr)				
Disconnection of Rooftop Runoff (A/B Soils)	Up to 1 inch credit provided based upon disconnection flow length.	0	0	0	#DIV/0!	0	0				50%	0%	0.00	0.00	0.00				
Disconnection of Rooftop Runoff (C/D Soils)	Up to 1 inch credit provided based upon disconnection flow length.	0	0	0	#DIV/0!	0	0				25%	0%	0.00	0.00	0.00				
Disconnection of Non-Rooftop Runoff (A/B Soils)	Up to 1 inch credit provided based upon disconnection and contributing flow lengths.	0	0	0	#DIV/0!	0	0				50%	0%	0.00	0.00	0.00				
Disconnection of Non-Rooftop Runoff (C/D Soils)	disconnection and contributing flow lengths.	0	0	0	#DIV/0!	0	0				25%	0%	0.00	0.00	0.00				
Sheetflow to Conservation Areas (A/B Soils)	Up to 1 inch credit provided based upon conservation area width.	0	0	0	0	0	0				50%	0%	0.00	0.00	0.00				
Sheetflow to Conservation Areas (C/D Soils)	Up to 1 inch credit provided based upon conservation area width.	0	0	0	0	0	0				25%	0%	0.00	0.00	0.00				
Step 6: Select Micro-Scale Practices to Treat the ESD Rainfall Target																			
Micro-Scale Practices	P _E Credit Description	Contributing Drainage Area (sf)	Direct ESDv Received by Practice (cf)	WQv or ESDv from Up-Gradient Practices (cf)	WQv or ESDv credit (cf)	Runoff Volume Remaining (cf)					Baseline Phosphorous Removal Efficiency	Average Adjusted Removal Efficiency Rate	P Load to Practice (lbs/yr)	Load Reduction (lbs/yr)	Remaining Load (lbs/yr)

AquaShield™ sizing calculation for Rod N Reel Project

Project Name: **Rod N Reel**

Project location: **Chesapeake Beach, MD**

Design flowrate = 0.046 CFS/SF filter media

Design flow rate= 5.2 CFS

Filter area required= $5.2/0.046 = 113$ SF

Filtering area per row of filter= 12 SF

Hence number of filter rows= $113/12 = 9.42 = 10$ rows

Swirl pre-treatment chamber size= **AS-6**

Hence filter design size is **AF-6.10**

Q1" =5.2 CFS SO 26.0 - 5.2 =20.2 CFS WILL BE OVERFLOWED ON THE WEIR WALL

Compute WQv Storm Discharge -

Sizing Rule: MDE Stormwater Design Manual, Appendix D.10

TR-55 Summary:

<i>Rv</i>	0.95
<i>P</i> =	1
<i>Qa</i> =	0.95
<i>Tc</i> =	0.1

$$Rv = 0.05 + 0.009 * \%Impervious$$

$$\% Impervious = 100\%$$

$$Runoff (Qa) = Rv * P$$

$$CN = \frac{1000}{\left[10 + 5 * P + 10 * Qa - 10 * \sqrt{Qa^2 + 1.25 * Qa * P} \right]}$$

$$CN = 99.57$$

$$\text{Initial Abstraction (Ia)} = \left[(200 / CN) - 2 \right] 0.009$$

$$\text{Water Quality Rainfall (P)} = 1.00 \text{ inches (ESD Pe)}$$

$$Ia/P = 0.009$$

$$\text{Unit Peak Factor (qu)} = 1000 \text{ csm / in. (from Figure D-11.1)}$$

$$\text{Site Area (A)} = 3.50 \text{ acres or } 0.005469 \text{ mi}^2 (Am)$$

WQv Post Development

$$\text{Peak Discharge (Qp)} = (qu * Am * Qa) = 5.20 \text{ cfs}$$

TOWN OF CHESAPEAKE BEACH ZONING PERMIT APPLICATION

Permit #: _____
Issued: _____
Fee Paid: Yes / No

PROPERTY INFORMATION

SEE ATTACHED FEE SCHEDULE

Property Street Address: _____
 Property Tax ID#: _____
 Specific Use of Property: _____

Water: Well Municipal Sewerage: Septic System ☐ Municipal ☐

Is the above address within the floodplain? ____ Yes ____ No, In the Critical Area ____ Yes ____ No
 (If in Critical Area, please complete page 2 of this application)

Property Owner Information

Name: _____
 Address _____
 City, State, Zip _____
 Day phone _____
 E-mail _____

Applicant Information

Name: _____
 Address _____
 City, State, Zip _____
 Day phone _____
 E-mail _____

Description of Proposed Work: Please submit four (4) hard copies of the proposed site plan and one (1) electronic copy with this application and a Grading Exemption Form for any project that involves grading.

Signature of Owner or Authorized Agent

By signing below, I certify and agree as follows: (1) I am authorized to make this application; (2) all information provided is correct; (3) I will comply with all regulations of the Town of Chesapeake Beach which are applicable hereto; (4) I will perform only the work specifically described in this application and my submitted site plan; (5) I grant Town officials the right to enter onto the property for the purpose of evaluating my plan, inspecting the work permitted and posting notices if applicable; (6) I understand that if I choose to appeal, my appeal shall be in writing stating the grounds for appeal and shall be filed with the Board of Zoning Appeals within 30 calendar days of the date of issuance, decision, determination or order and that the right to appeal is waived if not timely filed.

Owner or Authorized Agent: (print) _____

Signature: _____ Date: _____

FOR TOWN USE ONLY:

Reviewed by: _____ Date: _____

Final Approval: _____ Date: _____

Planning & Zoning Administrator

Is there a supplemental condition letter or notice to applicant: ____ Yes ____ No

Is this a application for Use & Occupancy: ____ Yes ____ No

Is there a requirement for Public Works to review prior to breaking ground: ____ Yes ____ No

If marked yes, the Public Works Administrator must provide approval prior to breaking ground:

Final Approval Public Works Administrator: _____ Date: _____

Critical Area Lot Coverage Worksheet with Zoning Permit

Completion of this form is required for all projects within the Critical Area. If mitigation of any form is required, it shall be noted and/or shown on the site plan. For mitigation in the form of vegetative planting, the site plan or a separate landscape plan must show the location for the proposed planting and include a table that shows the species of the plants and number of each species. Additional information may be required. This form shall accompany a site plan and other relevant plan that shows the proposed work.

Property Information

Property Address: _____
Critical Area Designation: Circle one: IDA, LDA, RCA
Within the 100-foot buffer? ____ Yes, ____ No

Total Site Area (square footage): _____
Zoning District: _____

Lot Coverage Calculations

EXISTING CONDITIONS (square footage)		PROPOSED CONDITIONS (square footage)	
1. Main Building	_____	Main Building	_____
2. Accessory Structures	_____	Accessory Structures	_____
3. Driveway/Parking	_____	Driveway/Parking	_____
4. Walkways	_____	Walkways	_____
5. Patios	_____	Patios	_____
6. Other	_____	Other	_____
Total Square footage	_____	Total Square footage	_____
Percentage of Total Site Area	_____	Percentage of Total Site Area	_____

Will trees be removed in the Critical Area?

____ Yes ____ No If yes, please indicate location and number on the site plan.

Certification

I certify these statements to be true and accurate and hereby grant the Town of Chesapeake Beach official permission to enter my property to review the plan and conduct inspections.

Owner / Authorized Agent: (print) _____
Signature: _____

WHAT IS LOT COVERAGE? The following is counted toward lot coverage:

Area coverage by buildings and structures, accessory structures, (e.g. sheds, garages, swimming pools), parking areas, driveways, walkways, patios, or roads. Area covered by gravel, stone, shells, impermeable decking, pavers, or any man-made impervious material. Lot coverage does not include a fence or wall, less than one foot in width, a walkway in the Buffer or expanded buffer including a stairway that provides direct access to a pier, a wood mulch pathway, or a deck with gaps to allow water to pass freely.
